To assist new students with the fundamentals of the degree, the institution hosts an induction event. During this program, the principal, the heads of the various departments and the teachers engage with parents and students to provide a concise synopsis of the degree. In order to evaluate students' knowledge based on their interests, an interactive environment is established.

Students who get admitted into various engineering programs receive special orientation where they learn about the course structure, exam format, and overall course vision, all of which aid and enable them to navigate the course content.

**Slow learners:**

Students occasionally struggle to keep up and understand the subjects, especially in their first semester of college, because of the different teaching environment and patterns that colleges follow compared to schools.

**Strategies for slow learners:**

- In order to help these students improve their academic performance, tutoring and remedial classes are held to explain important subjects and answer any questions they may have.
- We closely monitor student attendance, and we will call or send an SMS to parents of students who frequently miss class or arrive late. to motivate them to consistently attend the classes.
- We encourage students to participate actively in all of their extracurricular activities in addition to assisting them in achieving academic success.
- One of our staff members is designated as a mentor or counselor for every 20 students; they regularly interact with the students in a friendly manner and help them to resolve their personal problems and accomplish their goals.

- Regular homework assignments are a crucial component of our teaching strategy for slow learners because they allow students to practice and refine their knowledge independently, leading to a thorough comprehension of the material.

**Advanced learners:**

Those who perform well on midterm exams and are exceptionally skilled at solving problems are considered advanced learners, and the following techniques are used with them.

**Strategies for Advanced Learners:**

- The following techniques are applied to identify bright students, who are individuals who perform well on midterm tests and are excellent at solving problems.
- To improve their general abilities, students are urged to join professional organizations like IEEE, IETE, and ISTE.
- To enhance their performance and abilities, they are challenged with a range of tasks and assignments.
- –A class representative is selected for each class based on the performance and skills displayed in the classroom. The class representative is in charge of planning departmental workshops and seminars that offer chances to network with experts in academia and the workplace.
- They are inspired to pursue internships in fields that are relevant to their core subjects.
